Project Name	Project - Personal assistance for seniors who are self reliant

Function to compare time:-

The screenshot displays the Node-RED web interface. On the left, the 'filter nodes' sidebar is visible, showing categories like 'flow', 'storage', and 'social'. The main workspace shows two flows. Flow 1 contains a 'timestamp' node connected to a 'function' node, which is then connected to a 'Medicine' node. Flow 2 contains a 'function' node connected to a 'delay 5s' node, which is then connected to a 'form' node. The 'Edit function node' panel on the right is open, showing the following JavaScript code:

```
1 var d = new Date();
2 var utc = d.getTime() + (d.getTimezoneOffset() * 60000);
3 var offset = 5.5;
4 newDate = new Date(utc + (3600000 * offset));
5 var n = newDate.toISOString();
6 var date = n.slice(0,10);
7 var time = n.slice(11,16);
8 global.set('time',time);
9 msg.payload = date + " " + time;
10 return msg;
```

The 'Enabled' checkbox at the bottom of the editor is checked.
